# Human Resources

HR departments are the hub of human relations in the company: they manage the reception of newcomers, facilitate dialogue between departments, and look after people's well-being. Often, however, these strategic activities are put on the back burner because of repetitive tasks--such as managing onboarding documentation, or updating management systems--that divert time and energy from the real value of the department.

Agentic AI: autonomous task execution, interaction with complex systems, and continuous adaptation.

Integrated hyperautomation: combination of automation, artificial intelligence and AI agentic in a single platform.

Custom automations: integration with custom platforms and different infrastructures.

Human Resources

Case Study

Automyo

Our no code platform

- ✓ Detects a new job description, collects the description, adapts it, and posts it on dedicated portals

- ✓ Retrieves CVs received, extracts the data, and forwards the consistent ones to the appropriate department

- ✓ Detects hiring confirmation, prepares the documents, sends them for signature, and then files them in the management systems.

The problem

Posting job ads: engaging multiple channels requires manual and repetitive tasks

CV screening: analyzing applications from different tools takes a lot of time

HR onboarding and documentation: numerous documents to sign and manage slow down the process

Reports available **in real time**

Operating times reduced by **up to 60%**

More time for relational activities

Advanced spreadsheet management

External software integration

Report Generation

Inferential analysis of data

On-screen data scanning

BOT to update data
