

A photograph of a man in a light-colored shirt standing and presenting to a group of people seated around a conference table in a modern office. A large screen in the background displays a presentation slide.

Human Resources

HR departments are at the heart of workplace relationships: they welcome new hires, **foster communication across departments**, and promote employee well-being. When repetitive tasks such as **managing onboarding documentation and updating systems** take over, there's less time to focus on people, and the department becomes less effective.

Agentic AI: autonomous task execution, interaction with complex systems, and continuous adaptation.

Integrated hyperautomation: combination of automation, artificial intelligence and AI agentic in a single platform.

Custom automations: integration with custom platforms and different infrastructures.

Human & Resources

Case Study

The problem

Posting job ads: engaging multiple channels requires manual and repetitive tasks

CV screening: analyzing applications from different tools takes a lot of time

HR onboarding and documentation: numerous documents to sign and manage slow down the process

Our solutions

- ✓ **Detects** a new job description, collects the description, adapts it, and posts it on dedicated portals.
- ✓ **Retrieves** CVs received, extracts the data, and forwards the consistent ones to the appropriate department.
- ✓ **Detects** hiring confirmation, prepares the documents, sends them for signature, and then files them in the management systems.
